DETAILED ACTION

This application contains claims directed to the following patentably distinct species of the claimed invention:

- a. Fig. 1-10, drawn to the receiving surface of detector (23) is tilted (Claims 1-5, and 14);
- b. Fig. 11-12A-12C, drawn to the optical path folding means (Claims 6-9, and 15);
- c. Fig 13-16, drawn to the prism (Claims 10-11, and 16);
- d. Fig 17, drawn to the diffraction grating, (Claims 12-13, 17).

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim appears to be generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

A telephone call was made to Pavan K. Agarwal on August 1, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Examiners Suggestions

Regarding claims 1, 3 and 6, light beams must be folded by the optical path folding means (29) for the horizontal synchronization receiving surface to receive the light beam, and the statement on page 1 lines 19-21, page 2 lines 9-12, and page 3 lines 28-28 are a contradiction to the principle, because if a light beam does not fold it does reach the horizontal synchronization detector or the light shielding member. Applicant should further define which optical folding means as being a first and second

optical means (e.g. the first optical means (29), the second optical means (33Y), etc.).

Applicant should consider these suggestions to further accelerate the prosecution.
